

ComponentOne® DemoWorks™

- **Minimal learning curve:** DemoWorks can be used by anybody with a minimal amount of time spent learning how to use it.
- **Go from screen to finished movie quickly:** Users can record screen activity and instantly produce a shareable movie in minutes. No special formatting is required. DemoWorks does the work for you.
- **Powerful editing empowers “one-take” demo creation:** When you make a mistake, you can hide the frames and edit mouse paths, eliminating the need to re-record.
- **Multiple movie formats:** DemoWorks produces Flash, WMV, AVI, animated GIF, and self-running EXE.
- **Small movie file size for easy sharing:** DemoWorks keeps file sizes small for easy download and email distribution.
- **Low cost way to enhance documentation and marketing:** Product demonstrations drastically improve the value of web sites and documentation.

Try the Free Version

DemoWorks Community Edition includes all the features DemoWorks offers and will output movies up to 30 seconds. This edition is free for unlimited use and can easily be upgraded to DemoWorks Professional for longer movies.

DemoWorks allows anybody to produce professional quality demonstration videos without programming, multi-media, or graphic design expertise. Record any screen activity, with or without audio narration, and produce videos in industry standard formats such as Flash, WMV, animated GIF, and AVI. You can also edit videos frame-by-frame, add captions, highlights, and more.

Use DemoWorks to Produce Videos for Multiple Purposes

- Product demonstrations for sales and marketing: Create professional Flash and WMV demonstrations or animated GIF snippets for Web sites.
- Self-running videos for CD delivery: Produce an EXE file with DemoWorks' own player.
- Help and tutorials: Create entire tutorials or include small clips in online Help.
- Online Support Content: Use movies for effective FAQs.
- Enhanced bug reports: Record a software problem in order to better describe it to support and development.

Easily Record Screen Activity

- Record your entire screen, a custom-sized region, or a single window.
- Record narration in real-time while recording, record during preview, or import it.

Edit Your Video

- Manage your project with a visual timeline and frame thumbnails.
- Add and format text captions.
- Add and format highlights.
- Edit frame, caption, and highlight lengths.
- Rearrange or hide frames.
- Insert new frames.
- Import media or graphics.
- Edit cursor style and mouse paths.

Produce the Format You Need

- Adobe® Flash™
- Microsoft® WMV
- Microsoft® AVI
- Animated GIF (for short clips, especially useful in Help files or bug reporting)
- Self-running EXE (no player install necessary)
- Sun Microsystems® Java™

Recording

- **Full-motion Recording**

Record any visible screen activity including—but not limited to—mouse clicks, mouse movement, keystrokes, animation, and menus.

- **Capture Cursor Movement**

Cursor movement is captured and available for later editing.

- **Autocapture and Manual Recording options**

Automatically record everything or only record what you want.

- **Multiple Recording Options**

Record a customizable region, application, window, or entire screen.

- **Background Mode**

Run DemoWorks in the background so that it is accessible when you need it via keyboard shortcuts or mouse click.

- **Action-based Recording**

Optional presentation mode only records user-initiated actions; good for presentations and cases where files must be small.

- **Record and Add Additional Frames**

Record new frames and add them to a project.

Text, Captions, and Other Effects

- **Insert Text and Images**

Insert any text or image.

- **Customizable Themed Captions**

Choose from a variety of caption styles and then edit and insert them.

- **Effect Fading**

Fade any effect in and out.

Movie Editing

- **User-friendly GUI**

Intuitive interface requires no special multimedia, programming, or IT skills. DemoWorks can be used by anybody.

- **Frame Thumbnails**

View all frames as thumbnails and perform simple editing tasks, such as delete and hide.

- **Timeline with Layers**

View all frames on a timeline to edit frame lengths and organization as well as add effects such as captions and highlights. You can even drag effects across frames. This view gives you an overview look at how all the movie elements work together.

- **Insert Narration**

Add audio files for narration or music.

- **Hide Frames with Cursor Motion Auto-correcting**

Hide any frame and DemoWorks will automatically adjust the cursor's path so it looks natural.

- **Customizable Mouse Cursors and Tracks**

Customize the mouse pointer style with any image and also customize the cursor's motion on the screen.

- **Masterframe**

Configure a Masterframe for items you wish to display across the entire movie, such as a logo.

- **Movie Properties**

Specify the frame rate, audio frequency, sizing, and other general movie properties.

- **Movie Preview**

Instantly view the movie in the DemoWorks player before you publish the output. Also, record narration as you watch the preview.

Publishing

- **Publishing Wizard**

Easy-to-use publishing wizard for setting preferences for each output.

- **Send to Email**

Send movie directly to email.

- **Optimize File Size**

DemoWorks produces very small file sizes for an optimal downloading experience.

- **Customize Window Size**

Specify the size of the movie player.

Output

- **Adobe Flash**

Generate a flash file with themed navigation bar.

- **Microsoft WMV**

Produce output in this Microsoft standard format. DemoWorks WMV is compatible with SilverLight applications.

- **Animated GIF**

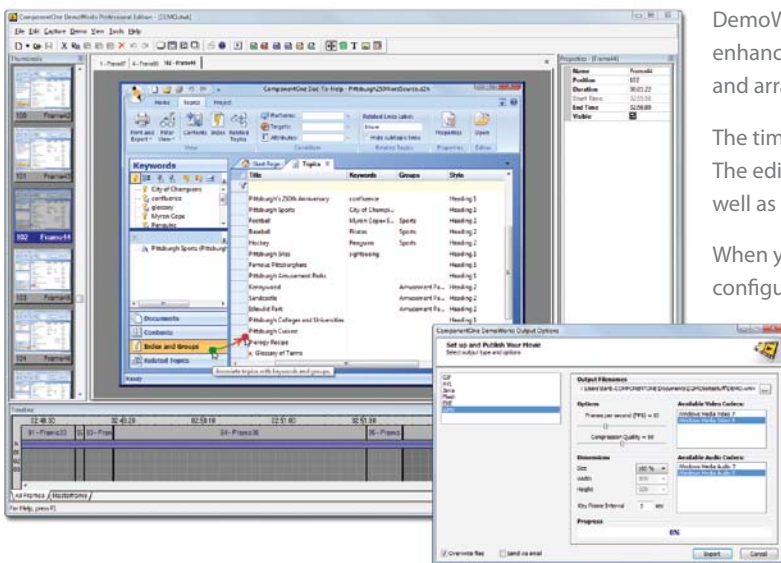

Produce animated GIFs for small movies. These are great for cases, such as including in emails and Help files, where movies need to be short and small in file size.

- **Windows AVI**

Produce movies in Windows' standard movie format.

- **Java**

Produce movies in Java format for a Web-browser alternative to Flash.

DemoWorks' intuitive interface gives you the tools you need to edit, enhance and publish your videos. Thumbnail views help you navigate and arrange frames.

The timeline allows you to manage layers of effects and frame timing. The editing canvas helps you insert captions, images and highlights as well as manipulate the cursor's icon and path.

When you are ready to publish, the wizard gives you the controls to configure your WMV, Flash, AVI, animated GIF, or EXE output.
